AND PETROGRAPHY

Igor Vilkovský

MASTER OF SCIENCE THESIS

GEMOLOGICAL CHARACTERIZATION OF NATURAL
AND SYNTHETIC TREATED DIAMONDS

Sosnowiec 2012

Key words: diamond, natural & synthetic, treatment, color, identification, FT-IR, Vis-NIR spectroscopy, photoluminescence, DiamondView

ACKNOWLEDGEMENTS

All the work undertaken for my Master of Science thesis would not have been possible without the support of many people.

I would like to show my greatest appreciation to my tutor dr Włodzimierz Łapot, the head of the Gemology Laboratory “LabGem” at the Faculty of Earth Sciences who was abundantly helpful and offered invaluable assistance, support and guidance during the study. I am grateful for an opportunity to work with him and I would like to thank him for helping me with the research and by the loaning of twenty diamond samples from his collection for my research thesis. I highly appreciated to work with synthetic gem diamonds from his collection, because due to their inaccessibility I would not have option to access them. Dr Łapot gave me a willing assistance with his tremendous support and help. I felt motivated and encouraged every time as I attend our consultations. Without his encouragement and guidance this project would not have been made.

I am also grateful to my supervisor prof. dr hab. Janusz Janeczek, prof. UŚ dr hab. Maria Czaja for luminescence measurements, prof. UŚ dr hab. Monika Fabiańska for correcting my English grammar and the whole collective at the Department of Geochemistry, Mineralogy and Petrography of University of Silesia.

Thanks must go to my family for unending encouragement and support. My thanks and appreciations also go to my friends, classmates for their help and people who have willingly helped me out to complete successfully this project.

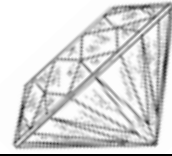

TABLE OF CONTENTS

Acknowledgements	2
Table of contents	3
1 Introduction	5
1.1 Properties of diamond	6
1.2 Natural diamonds	8
1.3 Synthetic diamonds	9
1.3.1 HPHT – High Pressure High Temperature synthetic diamonds .	10
1.3.2 CVD – Chemical Vapor Deposition synthetic diamonds	12
1.4 Cause of colors in diamonds	13
1.5 Types of diamonds	16
1.6 Properties of jewelry diamonds	17
2 Diamond treatment	19
2.1 Color treatments	20
2.1.1 Irradiation	20
2.1.2 Annealing	22
2.1.3 HPHT treatment	23
2.1.4 Combinations of the mentioned treatment techniques	28
2.1.5 Surface coating	29
2.2 Clarity treatments	30
2.2.1 Laser drilling	31
2.2.2 Yehuda treatment	31
2.2.3 VinsDiam UDDC technology	32
3 Research methods of diamonds	33
3.1 Internal features of diamonds	34
3.1.1 Inclusions	34
3.1.1.1 Inclusions in natural diamonds	34
3.1.1.2 Inclusions in synthetic diamonds	36
3.1.2 Graining	36

3.1.3	Zoning	37
3.2	Magnetism	38
3.3	Optical effect ADR – anomalous double refraction	39
3.4	Luminescence	39
3.5	DiamondView	40
3.6	Optical spectroscopy	42
3.6.1	FTIR spectroscopy	43
3.6.2	Vis – NIR spectroscopy	46
3.6.3	Photoluminescence spectroscopy	47
4	Presentation of samples and results of research	49
5	Spectral data for diamonds classification	144
6	Discussion	147
6.1	Materials	147
6.2	Methods	147
6.3	Description of gemological properties	149
6.4	Standard gemological examination	151
6.5	Advanced gemological examination	154
6.5.1	FTIR Spectroscopy	154
6.5.2	Vis – NIR Spectroscopy	155
6.5.3	Photoluminescence	156
6.5.4	DiamondView	158
7	Conclusion	159
	List of figures	162
	List of tables	163
	Abbreviations	164
	References	165
